

sheet may be formed of a rectangular sheet of paper having a length of about 11 inches and a width of 8 to 8.5 inches, to approximate standard 8.5x11-inch paper, with the pocket sheet formed of rectangular sheet of paper having a length of about 11 inches and a width of 5 to 6 inches.

On page 4, please replace the paragraph extending from line 6 through line 22, with the paragraph:

Figure 2 illustrates a first embodiment of this invention. pocket insert 1 includes base sheet 10 of paper material and pocket sheet 20 of paper material. For this illustrated embodiment, each of the base sheet and the pocket sheet are formed of separate rectangular sheets of paper. Base sheet 10 includes a first edge 11, a second edge 12, a third edge 13 and a fourth edge 14. Second edge 12 is adjacent to the portion of base sheet 10 that will ultimately be bound to a binding. First edge 11 and second edge 12 define the width of the base sheet 10 and third edge 13 and fourth edge 14 define a length of base sheet 10. Pocket sheet 20 includes a first edge 21, a second edge 22, a third edge 23 and a fourth edge 24. First edge 11 is contiguous with first edge 21, third edge 13 is contiguous with third edge 23, and fourth edge 14 is contiguous with fourth edge 24. Additionally, the two sheets are adhered to one another with strips of adhesive. More specifically, adhesive strip 31 is proximate to and along edges 11 and 21, adhesive strip 33 is proximate to and along edges 13 and 23 and adhesive strip 34 is proximate to and along edges 14 and 24. Thus, the base sheet 10 and the pocket sheet 20 are joined along seams defined by only a single layer of the base sheet and a single layer of the pocket sheet, wherein an adhesive may be disposed therebetween.

On page 5, please replace the paragraph extending from line 1 through line 7, with the paragraph:

The embodiment in Figure 2 further includes an adhesive strip 35 running widthwise to the two sheets and adhering the sheets together. Strip 35 extends between and parallel to edges 23 and 24 of pocket sheet 20, preferably about midway between these two edges. Again, the strip 35 provides a seam having a thickness that includes only a single layer of the base sheet 10
